

Collaborative on Health and the Environment

Almost **5000** individuals and organizations from **87 countries** and **all 50 US states** are CHE partners.

CHE promotes civil and science-based dialogue among our partners on all environmental contributors to human health.

CHE's partners engage in lively and robust dialogues through a wide variety of topical listservs.

- Children's Health
- Cancer
- Autism
- Fertility/Reproductive Health
- Integrative Health
- Breast Cancer
- Science
- Asthma
- Diabetes-Obesity Spectrum
- Mental Health
- Learning and Developmental Disabilities
- Cumulative Impacts
- Electromagnetic Fields
- Healthy Aging
- Climate Change

The combined effects of many contributors to health and disease are complex and often difficult to assess.

However, we can improve health outcomes only if we understand the interactions between environmental and social stressors and make changes upstream.

Through information sharing and commentary, CHE spurs conversations about this complex

"ecological model of health"

towards prevention-oriented actions.

CHE's science-based publications have informed decision-making at every level for more than a decade.

CHE Publications, 2002-2015

CHE provides free conference calls to our partners and the public.

Calls feature cutting-edge researchers and other environmental health leaders presenting the latest science and its policy implications.

CHE Teleconference Calls

CHE's call recordings have been downloaded more than

300,000 times since 2011.

Call recordings are available via podcast and through CHE's website.

CHE's lauded

Toxicant and Disease Database

summarizes information about

2847 connections between

620 toxicants and

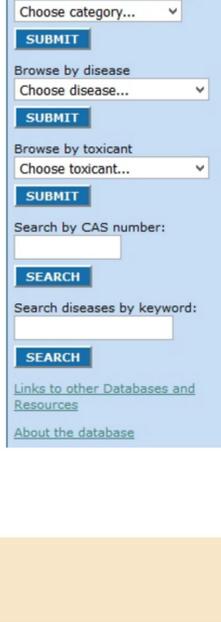

203 diseases.

CHE's database is used regularly by scientists at

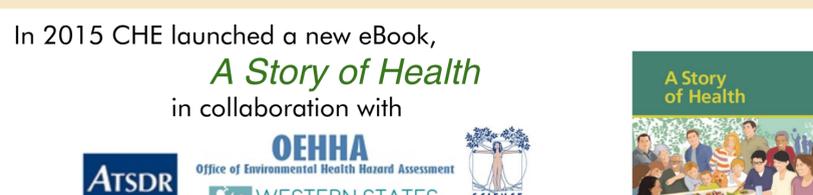

the National Institute of Environmental Health Sciences

and other researchers, health professionals and advocates, with more than

32,000 accesses in the last year.

CHE's blog includes more than **200** posts.

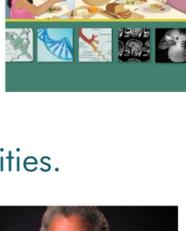

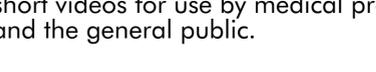

CHE's blog provides science-based summaries, analysis and commentary on environmental health topics.

In 2015 CHE launched a new eBook,

A Story of Health

in collaboration with

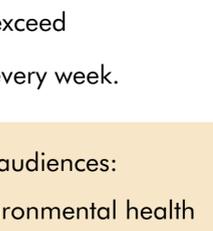

To date, the eBook has **3** interactive stories on

asthma, childhood leukemia and learning and developmental disabilities.

The eBook includes a wealth of graphics and

30 short videos for use by medical professionals and the general public.

The CDC provides continuing education credits to health professionals who complete *A Story of Health*.

Registrations for the CE course now exceed

1700, with more signing up every week.

CHE publishes **4** news feeds of interest to various audiences:

ALL NEWS For those who want all the latest environmental health news, research, and announcements.

YOUR HEALTH For those who want to know about news and research that can guide decisions about your own health.

FERTILITY & REPRODUCTIVE HEALTH For health professionals and researchers in this field.

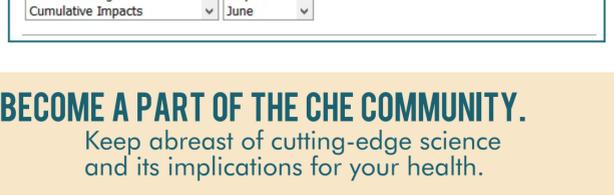

AUTOIMMUNE DISORDERS For health professionals and researchers in this field.

Feeds are available on CHE's website or via RSS.

CHE also has a growing presence on Facebook

and Twitter

bringing the science to new audiences.

CHE's calendars contain dozens of events and are generally updated every few days.

BECOME A PART OF THE CHE COMMUNITY.

Keep abreast of cutting-edge science and its implications for your health.

ECOLOGICAL MODEL OF HEALTH

- chemicals
- nutrition
- income
- occupation
- electromagnetic fields
- climate change
- infectious disease
- gene-environment interactions
- built environment
- social support
- ionizing radiation
- health care

CONVERSATIONS

- listservs
