Project TENDR

Jeanne Conry, MD, PhD, FACOG
Past President
American Congress of Obstetricians and Gynecologists
July 13, 2016
The American Congress of Obstetricians and Gynecologists (ACOG) is the nation’s leading group of physicians providing health care for women. With more than 57,000 members, ACOG strongly advocates for quality health care for women, maintains the highest standards of clinical practice and continuing education of its members, promotes patient education, and increases awareness among its members and the public of the changing issues facing women’s health care.
Ob-gyns are primary care providers

- Ob-gyns provide more preventive services for women than any other provider type
- Only physician seen regularly by many women during their reproductive years
- **Uniquely poised to intervene during preconception & pregnancy – critical windows of human development**
What is “The Environment”? 
“ENVIRONMENT” Includes:

- Industrial chemicals
- Agricultural chemicals
- Physical agents (heat, radiation)
- By-products of combustion and industrial processes (dioxin)
- Foods and nutrients
- Prescription drugs
- Lifestyle choices and substance abuse
- Social and economic factors

Why Do We Not Address Environmental Issues?

Medical Providers do not discuss Environmental Impacts on Health because

A. The research is lacking
B. We are not comfortable with the topic
C. There are no data to support the topic historically
D. We have more important topics to discuss
E. We follow the ostrich approach: we hide our heads unless we can give a full and complete answer, OR solve a problem
F. We really are unaware that there is a problem
G. We DO! We just have not appreciated it (Blood sugar or hypertension)
How do we get the attention of all clinicians?
We need to **translate** the science
Should We Be Concerned?

Dr. Birnbaum: NIEHS, Sharpe and Irvine, 2004
Should We Be Concerned?

Increase in Diabetes (1980-2010)

Increase in Autism Prevalence

Increase in Asthma

Increase in ADHD

Dr. Birnbaum: NIEHS, Data from CDC / National Center for Health Statistics
In the United States alone, 84,000 chemicals are listed by the Environmental Protection Agency.

- 700 new chemicals released annually
- 3000 chemicals are “high volume” or exceed 1 million pounds of use a year
- The vast majority have not had research or been subjected to standard studies.

U.S. Environmental Protection Agency. TSCA Chemical Substance Inventory. 2012 Available from: http://www.epa.gov/oppt/existingchemicals/pubs/tscainventory/basic.html.

Environmental chemicals can cross the placenta
ACOG/ASRM Committee Opinion

- Exposure to harmful environmental chemicals is ubiquitous
- Everyone, everywhere, everyday

43 Chemicals Found in Virtually Every Pregnant Woman in the US

ACOG/ASRM Committee Opinion

All exposures are not created equal

Underserved and minority populations disproportionately impacted

More likely to be exposed to higher levels of outdoor and indoor pollutants
ACOG/ASRM Committee Opinion

All exposures are not created equal

Women of reproductive age with occupational exposure to toxic chemicals are highly vulnerable to adverse reproductive health outcomes.
The “Alphabet Soup” of Synthetic Chemicals

- LEAD
- MERCURY
- Pesticides (DDT)
- Polychlorinated Biphenyls (PCB)
- Polybrominated Biphenyls (PBB)
- Dioxin
- BPA
- PFOA
- Phthalate
- Pharmaceutical (DES)
- Soy (baby formula)
Endocrine disruptors are chemicals that may interfere with the body’s endocrine system and produce adverse developmental, reproductive, neurological, and immune effects in both humans and wildlife.

Many Toxic Exposures Cannot Be Controlled by Individual Action
Individual Action Alone is Not Enough

MEET MOLLY GRAY.
Eats organic. Avoids BPA. Buys natural cleaners. 
Loaded with toxic chemicals.

- Nine pregnant women tested from Washington, Oregon, and California, during the second trimester had detectable:
  - Bisphenol A
  - Mercury
  - At least four phthalates
  - At least two and up to 4 perfluorinated chemicals
Ob-gyns don’t need to be experts in environmental health to provide useful information to patients. However, they should:

- Be familiar with their geographic area
- Take an exposure history early
- Provide information about how the food system affects health
- Communicate the science and areas of uncertainties about environmental exposures

Food Matters: What to Eat?

Your health depends on the food you eat.

The health of communities and the environment we depend on for life are also impacted by how food is grown and how it gets to your dinner plate.

This brochure provides tips for making food choices to protect your health and the health of your family and community.

The brochure also provides many more resources to learn more about how the food we eat impacts our health. For more information, visit: http://www.prhe.ucsf.edu/prhe/foodmatters.html

There are many ways to make a difference. Here are some suggestions to get started.
Pharmaceuticals must show efficacy and safety *prior to* exposing humans.

Manufactured chemicals need to show evidence of harm *prior to removing human exposure*.

Policy Gaps

When environmental chemicals act like uncontrolled medicine

Linda S. Birnbaum
National Institute of Environmental Health Sciences and National Toxicology Program, Research Triangle Park, NC 27709, USA

In the same way as medicines are delivered to produce effects in the endocrine system, environmental chemicals can be similarly delivered to produce unwanted endocrine effects, resulting in a staggering increase in several diseases. These effects on endocrine and other physiological systems can have significant population-level impacts and thus require public health approaches to disease control.

breast cancer risk, and women who were exposed to DDT before the age of 4 years exhibited the highest risk [7]. Elevated concentrations during adolescence of serum polybrominated diphenyl ethers (PBDE), a common flame retardant, are associated with a younger age of menarche, which in turn might contribute to increased risk of breast cancer [8].

Exposure to Toxic Environmental Agents

ABSTRACT: Reducing exposure to toxic environmental agents is a critical area of intervention for obstetricians, gynecologists, and other reproductive health care professionals. Patient exposure to toxic environmental chemicals and other stressors is ubiquitous, and preconception and prenatal exposure to toxic environmental agents can have a profound and lasting effect on

ABSTRACT

Exposure to toxic environmental chemicals during pregnancy and breastfeeding is ubiquitous and is a threat to healthy human reproduction. There are tens of thousands of chemicals in global commerce, and even small exposures to toxic chemicals during pregnancy can trigger adverse health consequences. Exposure to toxic environmental chemicals and related health outcomes are inequitably distributed within and between countries; universally, the consequences of exposure are disproportionately borne by people with low incomes. Discrimination, other social factors, economic factors, and occupation impact risk of exposure and harm. Documented links between prenatal exposure to environmental chemicals and adverse health outcomes span the life course and include impacts on fertility and pregnancy, neurodevelopment, and cancer. The global health and economic burden related to toxic environmental chemicals is in excess of millions of deaths and billions of dollars every year. On the basis of accumulating robust evidence of exposures and adverse health impacts related to toxic environmental chemicals, the International Federation of Gynecology and Obstetrics (FIGO) joins other leading reproductive health professional societies in calling for timely action to prevent harm. FIGO recommends that reproductive and other health professionals advocate for policies to prevent exposure to toxic environmental chemicals, work to ensure a healthy food system for all, make environmental health part of health care, and champion environmental justice.

NOW

✓ The nations scientists say it is time to act
✓ EVERY voice matters
✓ TSCA reform was the first step
✓ We must be led by unbiased research
✓ The burden of proof must SHIFT: right now the burden is on us to Prove *Harm*. The burden should fall on industry to Prove *Safety BEFORE a chemical is in use.*
